EDUCATION

Indian Institute of Information Technology, Vadodara *Graduated May 2026*

B.Tech in Computer Science and Engineering | CGPA: 7.91/10.0

Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP, Software Engineering

EXPERIENCE

Full-Stack Developer Intern | **EY** *Jul 2026 – Sep 2026*

- Plot allotment for the Medical Device Park (Sector 28, YEIDA) was tracked manually across departments. Built the MDP Allotment Management Dashboard, a Flask and MySQL full-stack app managing 7 tables with CRUD, schema-driven dynamic forms, and automatic stage-to-stage progression with data sync.
- Access had to be restricted by department. Implemented role-based access control with Werkzeug password hashing, CSRF protection, login lockout and session timeout, plus a searchable audit log of every create/update/delete/login action.
- Built CSV/Excel bulk import with smart header matching and per-row validation, an interactive SVG park map with live plot data, and stage-wise PDF/Excel reports using ReportLab and openpyxl.
- Compliance follow-ups were manual. Automated reminders with a Python and PyMySQL script, then added scheduled, template-based email reminders with run history in the dashboard; moved delivery to the Brevo API after Render blocked SMTP.
- Deployed the app on Render (Gunicorn) with MySQL on Railway for global access; wrote technical reports and setup guides, and prepared tender, brochure and outreach documents for the park.

Software Engineering Intern | **GlobalLogic (A Hitachi Group Company)** *May 2025 – Jul 2025 | Noida, UP*

- Existing document Q&A system gave slow, inaccurate answers. Built a RAG pipeline using Python, LangChain, FAISS, and OpenAI GPT-4 boosted response accuracy by 40% and reduced query latency to under 800ms.
- Data ingestion was a bottleneck. Rewrote the pipeline with Python asyncio for async processing and a Redis caching layer (85% cache hit rate) cut ingestion time by 35%.
- Deployments were manual and inconsistent. Containerized the app with Docker multi-stage builds (60% smaller images) and set up a GitHub Actions CI/CD pipeline for automated testing and deployment.

Web Development Intern | **Fast Conversion Marketing Solution** *Mar 2024 – Jun 2024 | Remote*

- The frontend lacked reusable structure and had poor mobile performance. Made 20+ responsive components using React.js, Redux, and Tailwind CSS improved Core Web Vitals (LCP, FID, CLS) by 30% and lifted mobile engagement by 25%.
- Backend APIs were slow and hard to maintain. Designed 15+ RESTful endpoints with Node.js and Express.js, and streamlined MongoDB queries using compound indexes and aggregation pipelines.
- P95 API latency was 480ms. Profiled and fixed bottlenecks using query optimization and caching reduced latency to 290ms (40% improvement).

PROJECTS

Academic Insight Portal | *Node.js, Express.js, React.js, MySQL, JWT*

- Problem: No central system for grades and attendance. A full-stack portal with RBAC dashboards serving 300+ students and 25+ faculty; JWT auth with bcrypt hashing.
- Improved MySQL schema with compound indexes on student_id + course_id + semester cut query response time from 800ms to 400ms (50% improvement).

Malicious Website Detection System | *FastAPI, XGBoost, Python, Docker*

- A FastAPI REST service extracting 30+ URL features (domain age, SSL validity, redirect chains) and classifying via XGBoost + Random Forest ensemble 96% accuracy, 0.98 ROC-AUC, 100+ URLs/min.
- Added SHAP-based per-prediction explanations and a risk scoring dashboard; containerised with Docker for portable deployment.

Full-Stack Food Delivery Platform | *Node.js, Express.js, React.js, MongoDB, Redis, Socket.io, AWS*

- Built a MERN stack app with JWT auth (refresh token rotation + bcrypt RBAC); MongoDB compound indexes + Redis caching layer (85% hit rate) cut average page load from 2.1s to 1.05s.
- Integrated Socket.io for real-time order tracking; automated deployment to AWS via GitHub Actions.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, C++, SQL
Backend: Node.js, Express.js, FastAPI, Flask, REST APIs, Microservices
Frontend: React.js, Redux Toolkit, Next.js, HTML5, CSS3, Tailwind CSS
Databases: MongoDB, PostgreSQL, MySQL, Redis, FAISS
Cloud & DevOps: Docker, AWS, Render, Railway, GitHub Actions, CI/CD, Git, Linux

ACHIEVEMENTS, LEADERSHIP & COMMUNICATION

- 3-Star CodeChef (max 1721, top 15% among 500K+ users) | 450+ DSA problems: LeetCode 200+ (50+ Hard), CodeChef 150+, Codeforces 100+ (max 789)
- Sports Committee Head (2 yrs) coordinated events and logistics for 200+ participants at college tech fest.
- Mentored 50+ juniors via GDSC sessions and seminars on Technical and management skills and also on DSA and development.
